## 1. Introduction

### 1.1.General Description

AI7931LD is a highly integrated IoT module that features an ARM® Cortex-M33 application processor, a low power 1x1 802.11a/b/g/n/ac/ax dual-band Wi-Fi subsystem, a Bluetooth v5.0 subsystem and a Power Management Unit (PMU). The Wi-Fi subsystem and a Bluetooth v5.0 subsystem offer feature-rich wireless connectivity at high standards, and deliver reliable, cost-effective throughput from an extended distance. The AI7931LD is designed to support standard based features in the areas of security, quality of service and international regulations, giving end users the greatest performance any time and in any circumstance.

The AI7931LD is based on ARM® Cortex-M33 with floating point microcontroller (MCU) including SRAM/ROM memory. The module also supports rich peripheral interfaces, including SDIO, SPI master, I2C, I2S\_IN, IR input, UART, AUXADC, PWM, and GPIOs.

These features are used to download and debug a project on EK-AI7931LD. The front view of the EK-AI7931LD including AI7931LD module is shown in Figure 1.

Figure 1. Front view of EK-AI7931LD

## 2. Get started with the HDK

Before commencing the application development, you need to configure the development platform.

### 2.1. Configuring the EK-AI7931LD

The top view of the EK-AI7931LD is shown in Figure 2

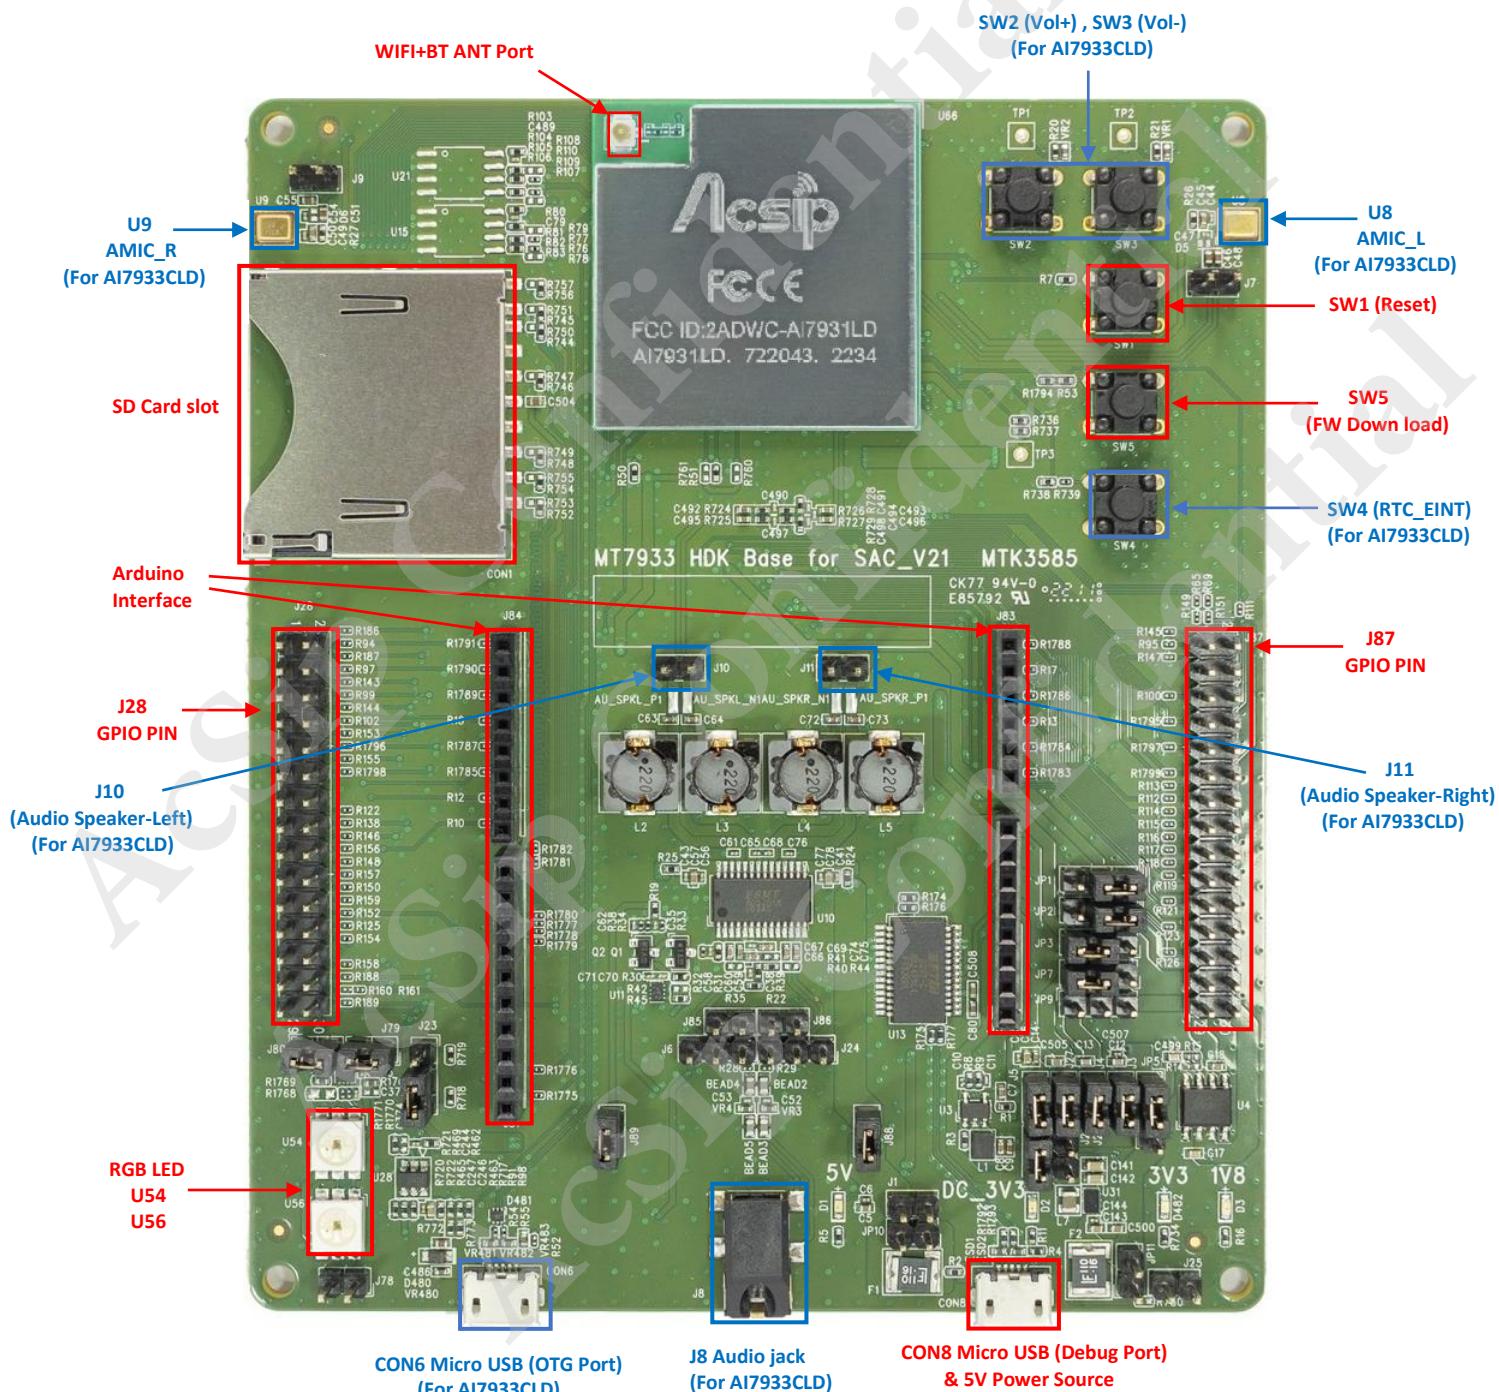

Figure 2. Jumpers and connectors on the EK-AI7931LD

# PRODUCT USER GUIDE [www.acsip.com.tw](http://www.acsip.com.tw)

The description of pins (Figure 2) and their functionality is provided below:

- 1) CON8 transfer USB interface to UART interface, can debug through UART, transmit, and receive a signal form PC.
- 2) CON8 is a USB 5V power for EK-AI7931LD, or you can use external 5V power at J1.
- 3) Press SW1 to reset the system For SW2~SW5 more detail, please see “section 4.4”.
- 4) For Wi-Fi and BT function AI7931LD module reserve a Wi-Fi + BT IPEX connector. Please connect external antenna to transmit and receive RF signals.
- 5) U54/U56 are RGB LEDs and these RGB LED will be controlled by SPIM interface.
- 6) J28 and J87 support multifunction GPIO interface, for more detail please refer to “section 4.7”.

## 2.2. Installing the FTDI drivers on Microsoft Windows

To configure the EK-AI7931LD:

- 1) Connect the EK-AI7931LD CON8 to the computer using a micro-USB cable.
- 2) Check your PC is x86 or x64 system. And download and install FTDI Windows serial port driver from Here. (The red block showed the download file at below figure)

Currently Supported D2XX Drivers:

Operating System	Release Date	Processor Architecture						Comments
		x86 (32-bit)	x64 (64-bit)	ARM	MIPS	SH4		
Windows*	2017-08-30	2.12.28	2.12.28	-	-	-	WHQL Certified. Includes VCP and D2XX. Available as a setup executable. Please read the Release Notes and Installation Guides.	
Windows RT	2014-07-04	1.0.2	-	1.0.2	-	-	A guide to support the driver (AN_271) is available here	
Linux	2018-06-22	1.4.8	1.4.8	1.4.8 ARMv5 soft-float 1.4.8 ARMv5 soft-float uClibc 1.4.8 ARMv6 hard-float *** 1.4.8 ARMv7 hard-float *** 1.4.8 ARMv8 hard-float ***	1.4.8 MIPS32 soft-float 1.4.8 MIPS32 hard-float 1.4.8 MIPS openwrt-uclibc		If unsure which ARM version to use, compare the output of readelf and file commands on a system binary with the content of release/build/libftd2xx.bt in each package. ReadMe	 Video Install Guide

- 3) If your OS is Windows7 or 10, please open Windows Control Panel then click System and enter Device Manager.
- 4) In Device Manager, navigate to Ports (COM & LPT) (see Figure 3).
- 5) A new COM device should appear under Ports (COM & LPT) in Device Manager, as shown in Figure 3. Note the COMx port number of the serial communication port, this information is needed to send command and receive logs from the COM port.

Due to the com port numbers (COMx) are different at different PC. As red block in Figure 3. showed, means “CM33 UART”.

## 3. Hardware Features

This section provides the main supported features of the EK-AI7931LD. The detailed description of the features is provided in the upcoming sections.

### 3.1. Features Description

#### 3.1.1. Technology and Package

- AI7931LD LGA-104 module, 32mm X 32mm X 2.7mm (Typ.)

#### 3.1.2. Power Management and Clock Source

- Integrates high efficiency power management unit with single 3.3V power supply input.
- Integrates 26MHz crystal clock with low power operation in idle mode.
- Integrates 32KHz crystal oscillator for low power sleep mode.

#### 3.1.3. Platform

- ARM® Cortex-M33 MCU with FPU with up to 300MHz clock speed
- Embedded 1MB SRAM and 4MB PSRAM
- Embedded 16MB serial flash with eXecute In Place (XIP) and on-the-fly AES
- Supports Hardware crypto engines including AES, DES/3DES, SHA, ECC, TRNG for network security
- Supports up to 22 General Purpose IOs, which are multiplexed with SDIO, SPI Master, UART, I2C, I2S\_IN, AUXADC, PWM and GPIO interfaces
- Supports 12 DMA channels.

### 3.1.4. Wi-Fi

- IEEE 802.11 1T1R a/b/g/n/ac/ax 5GHz and 2.4GHz bands
- Supports 1x1 20MHz bandwidth, MCS0~8(256-QAM) in 2.4G/5GHz band
- Support uplink MU-OFDMA TX and downlink MU-OFDMA RX
- Support TX LDPC (Low-density parity check)
- Support RX STBC
- Wi-Fi security WFA WPA/WPA2/WPA3 personal
- QOS supports of WFA WMM
- Support CSI (Channel Signal Information)

### 3.1.5. Bluetooth

- BT5.0 2M\_PHY / Long Range / Advertising Extension / SAM / CS#2 / High Duty Cycle Non-Connectable ADV
- BT4.2 Link Layer Privacy / LE Secure Connection / LE Data Packet Length Extension / Link Layer Extended Scanner Filter Policies
- BT4.1 Link Layer Topology / Secure Connection
- BT4.0 BLE only mode
- Up to 8 BLE links
- Packet loss concealment
- Channel quality driven data rate adaptation
- Channel assessment and WB RSSI for AFH
- Supports Bluetooth/Wi-Fi coexistence

### 3.1.6. Miscellaneous

- Embedded eFuse to store specific device information and RF calibration data.
- Advanced TDD mode Wi-Fi/Bluetooth coexistence scheme.

## 4. Hardware Feature Configuration

### 4.1. Microcontroller

The AI7931LD features an ARM® Cortex-M33 processor, which is the most energy efficient ARM® processor currently available. It supports the clock rates up to 200MHz when core power is 0.7V and 300MHz when core power is 0.8V. The MCU executes the Thump-2 instruction set for optimal performance and code size, including hardware division, single cycle multiplication and bit-field manipulation. The AI7931LD includes a Memory Protection Unit (MPU) in Cortex-M33 MCU to detect unexpected memory access and provides other memory protection features. The AI7931LD also includes FPU in Cortex-M33 MCU.

### 4.2. Power Supply

EK-AI7931LD supports two types of power supply.

- 1) Power up with a micro-USB connector.

An on-board switching regulator provides voltage of 3.3V for the EK-AI7931LD, if the power is supplied from an on-board micro-USB connector CON8 (Figure 2). This supply can be isolated from the switching regulator using the jumpers.

Note: that the jumpers J2, J3, J4, J5, J27 pin1 and pin2. JP1, JP2, JP5 pin1 and pin2 are required to be set on. More details on the jumpers can be found in Table 1.

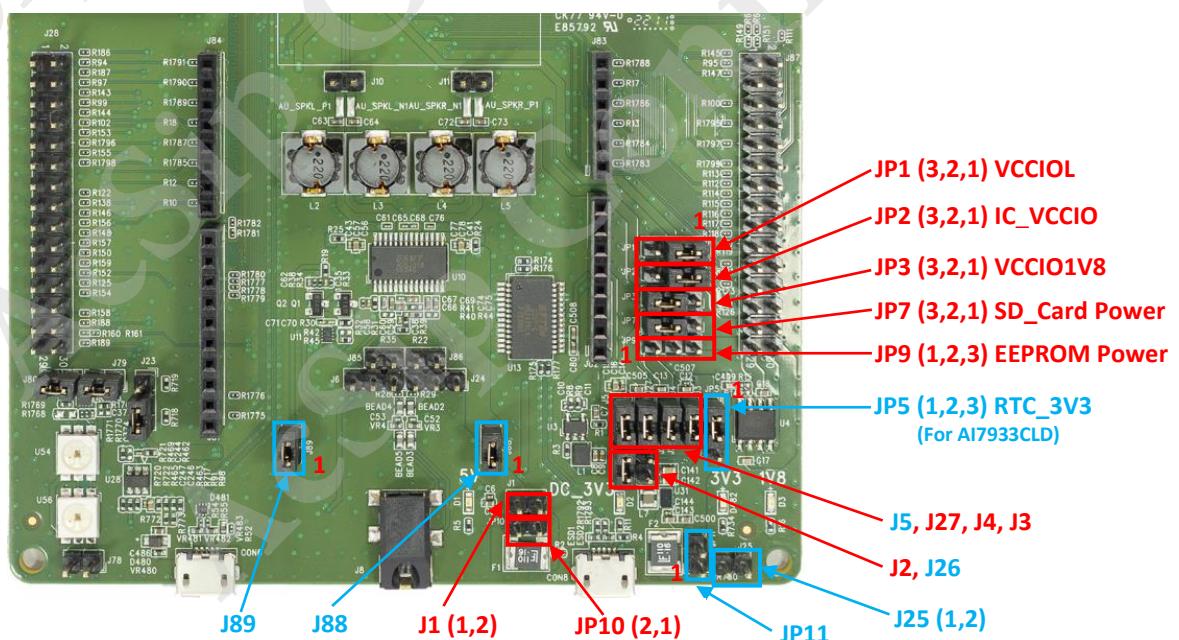

Figure 4. Default power jumper plot

# PRODUCT USER GUIDE [www.acsip.com.tw](http://www.acsip.com.tw)

**Table 1 Jumper settings for system power input through USB connection**

Jumper	Usage	Comments
J1	External 5V power supply	Use external power source to supply 5V voltage to EK-AI7931LD PCB. Pin 1 is EXUSB_5V, Pin2 is GND.
J2	DC-5V transfer to DC-3V3 current source	Pin 1 is DC_DC_3V3, Pin2 is 3V3_IN. Connect J2 to provide 3.3V power to the system.
J3	AI7931LD module power source	Pin 1 is 3V3_IN, Pin2 is BASE_3V3. Connect J3 to provide 3.3V power to the AI7931LD module.
J4	3V3 for EEPROM power	EEPROM has no parts. Pin 1 is 3V3_IN, Pin2 is EXTRA_3V3.
J5	3V3 for level shift IC's power supply	This function is only used by EK-AI7933CLD
J25	External Battery power supply	This function is only used by EK-AI7933CLD
J26	Battery power to 3V3 power source	This function is only used by EK-AI7933CLD
J27	3V3 for SD_CARD power	Pin 1 is 3V3_IN, Pin2 is SD_3V3. Connect J27 for power supply.
JP1	Switch VCCIO_L to 3V3 power domain or 1V8 power domain	Pin 1 is BASE_3V3, Pin2 is VCCIO_L, Pin3 is VCCIO18. Connect Pin (1,2) or Pin (2,3) to select power domain.  Caution: The flash of EK-AI7931LD default using 3V3 power domain, if you want to change VCCIO_L to 1V8 power domain please rework flash to 1V8 power domain flash (eq. W25Q128JWPIQ)
JP2	Switch IC_VCCIO to 3V3 power domain or 1V8 power domain	Pin 1 is BASE_3V3, Pin2 is IC_VCCIO, Pin3 is VCCIO18. Connect Pin (1,2) or Pin (2,3) to select power domain.
JP3	Switch VCCIO18 selection Internal or external power supply	Pin 1 is BASE_1V8, Pin 2 is VCCIO18, Pin 3 is PHYLDO_OUT. Connect Pin (1,2), use external 1.8V power supply. Connect Pin (2,3), use internal 1.8V power supply.
JP5	Switch RTC_3V3 is powered by system 3.3V or battery	RTC Mode is only used by EK-AI7933CLD
JP7	Switch SD_Card to 3V3 power domain or 1V8 power domain	Pin 1 is BASE_1V8, Pin 2 is SD_Card VDD, Pin 3 is SD_3V3 Connect Pin(1,2), SD_Card VDD is powered by BASE_1V8 Connect Pin(2,3), SD_Card VDD is powered by SD_3V3
JP9	Switch EEPROM(NC) to 3V3 power domain or 1V8 power domain	Pin 1 is EXTRA_3V3, Pin 2 is EEPROM_P, Pin 3 is BASE_1V8 Connect Pin(1,2), EEPROM is powered by EXTRA_3V3 Connect Pin(2,3), EEPROM is powered by BASE_1V8
J88	5V for (U10) Audio AMP power	Audio function is only used by EK-AI7933CLD
J89	5V for (U10) Audio AMP using	Audio function is only used by EK-AI7933CLD

2) Power up using a battery. ([RTC Mode is only used by EK-AI7933CLD](#))

When using a battery to power the system, J25 (Pin1+, Pin2-) needs to be connected. The battery voltage range should be between 3.6V and 4.2V. When JP5 (Pin2, Pin3) is connected, RTC\_3V3 will become battery powered and the LED light will light up. Remove J2 jumper connector and connect J26. The battery power will provide a stable 3.3V power supply to the system through the Buck-Boost converter IC. As shown in Figure 5.

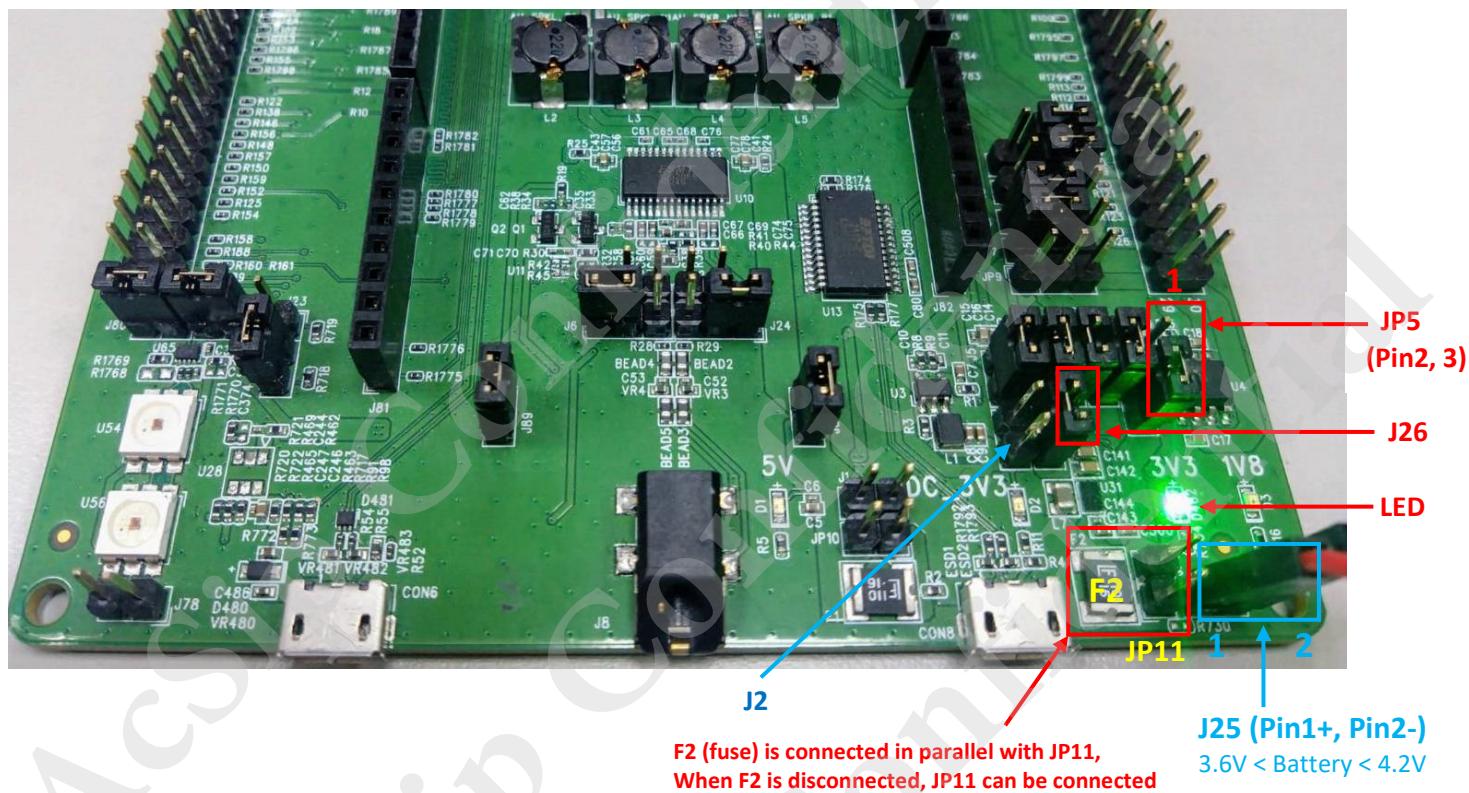

Figure 5. Power up the EK-AI7933CLD using a Battery

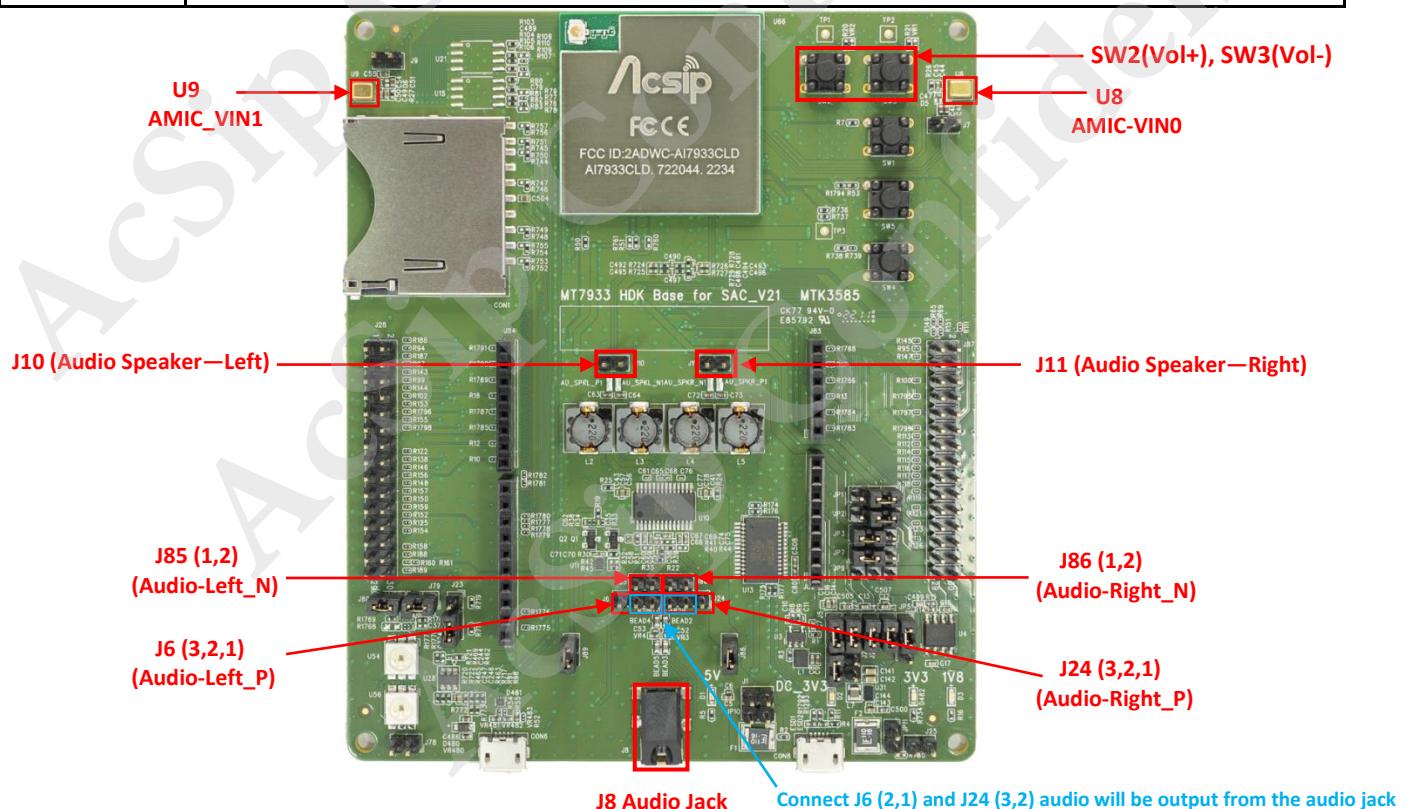

## 4.3.Audio

The instructions for using audio-related functions are shown in Table 2.

(Audio function is only used by EK-AI7933CLD)

**Table 2 Audio related function**

Item	Detail
J8	3.5mm audio jack for external active speaker.
J6	Audio-Left_P switch, Pin(3,2,1) Pin define (Audio amp_L_in_P, AU_AMP_VOLP, AU_HPL) Connect Pin (2,1) the audio is output by audio jack (J8). Connect Pin(3,2) the audio is output by speaker (J10)
J24	Audio-Right_P switch, Pin(3,2,1) Pin define (AU_HPR, AU_AMP_VORP, Audio amp_R_in_P) Connect Pin (3,2) the audio is output by audio jack (J8). Connect Pin(2,1) the audio is output by speaker (J11)
J85	Audio-Left_N, Pin1 is AU_AMP_VOLN, Pin2 is GND.
J86	Audio-Right_N, Pin1 is GND, Pin2 is AU_AMP_VORN.
J10	Audio header for left speaker, Pin1 is AU_SPKL_P1, Pin2 is AU_SPKL_N1
J11	Audio header for right speaker, Pin1 is AU_SPKR_N1, Pin2 is AU_SPKR_P1
U8	AMIC (AU0_VIN0) for left channel (the microphone hole is set at back side of EK-AI7931LD)
U9	AMIC (AU0_VIN1) for right channel (the microphone hole is set at back side of EK-AI7931LD)
SW2	Audio volume up button (KPROW0)
SW3	Audio volume down button (KPROW2)

**Figure 6. Audio Jumper and connector Locations**

## 4.4.Buttons

The EK-AI7931LD is equipped with buttons with the following functionality.

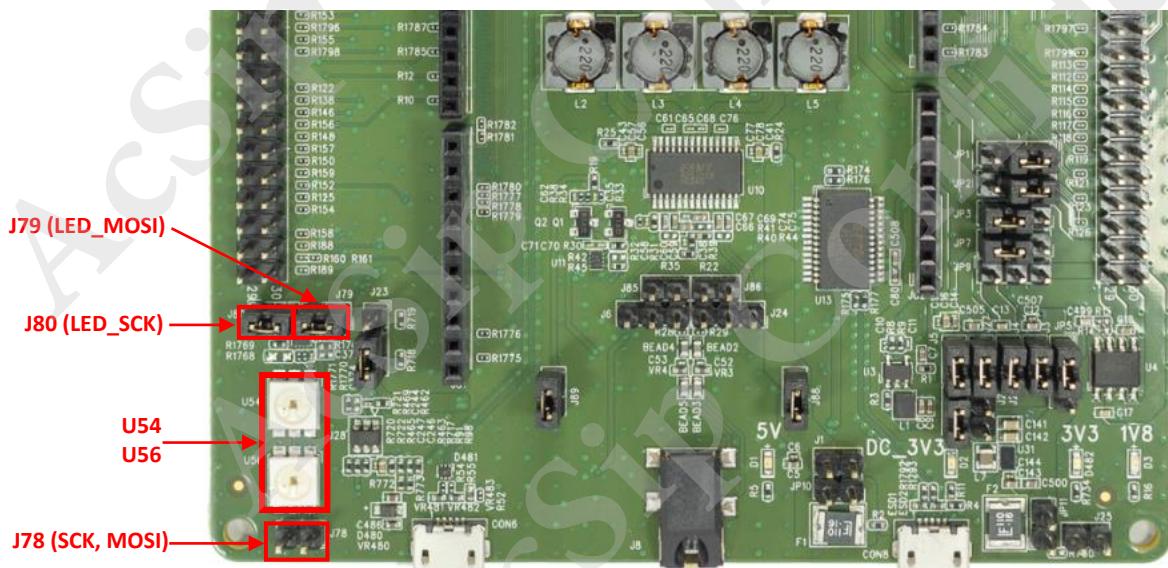

The push buttons are shown in Figure 2 The detail of buttons can refer to Table 3.

**Table 3 Buttons**

Button	Name	Detail
SW1	SYSRST	Press SW1 to restart the EK-AI7931LD
SW2	Vol+	Audio volume up button ( <a href="#">Audio function is only used by EK-AI7933CLD</a> )
SW3	Vol-	Audio volume down button ( <a href="#">Audio function is only used by EK-AI7933CLD</a> )
SW4	RTC_EINT	<a href="#">RTC Mode is only used by EK-AI7933CLD</a>
SW5	Force DL mode	Press SW5 to trigger strapping mode (download mode...)

## 4.5.RGB LED

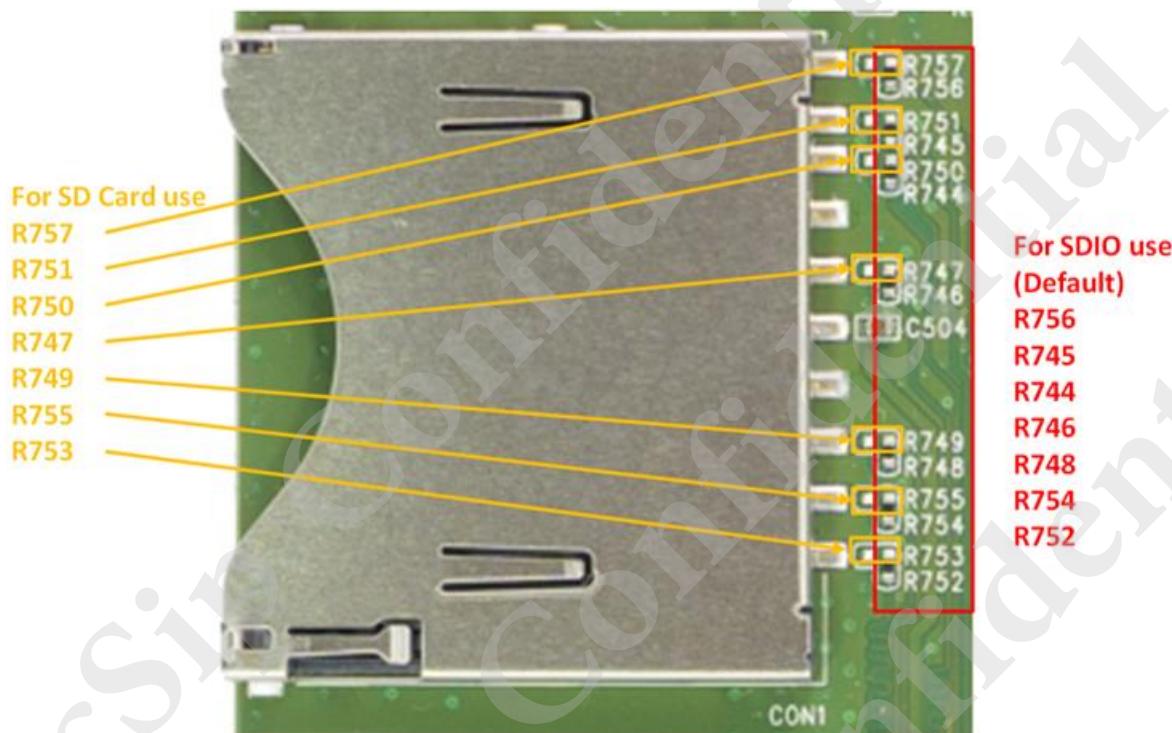

As Figure7 showed, the EK-AI7931LD has on-board RGB LEDs (U54/U56) which be controlled by SPIM interface. Please note that ensure jumper J79 and J80 are connected before using RGB LED function. If you want to connect more RGB LEDs, you can connect them through J78

**Figure 7. RGB LED**

## 4.6. SD Card

The EK-AI7931LD reserve a SD card slot to provide user to save data into a SD card. And note that there are some registers which placed need to be reworked before using SD card. Please refer to figure.8 and switch R756 to R757; switch R745 to R751; switch R744 to R750; switch R746 to R747; switch R748 to R749; switch R754 to R755; switch R752 to R753.

**Figure 8. SD card slot rework**

Note: AI7931LD must be powered on before inserting the SD card. If powered on with the SD card inserted, it will cause GPIO\_B\_0 = 0 and AI7931LD will not be able to enter normal mode.

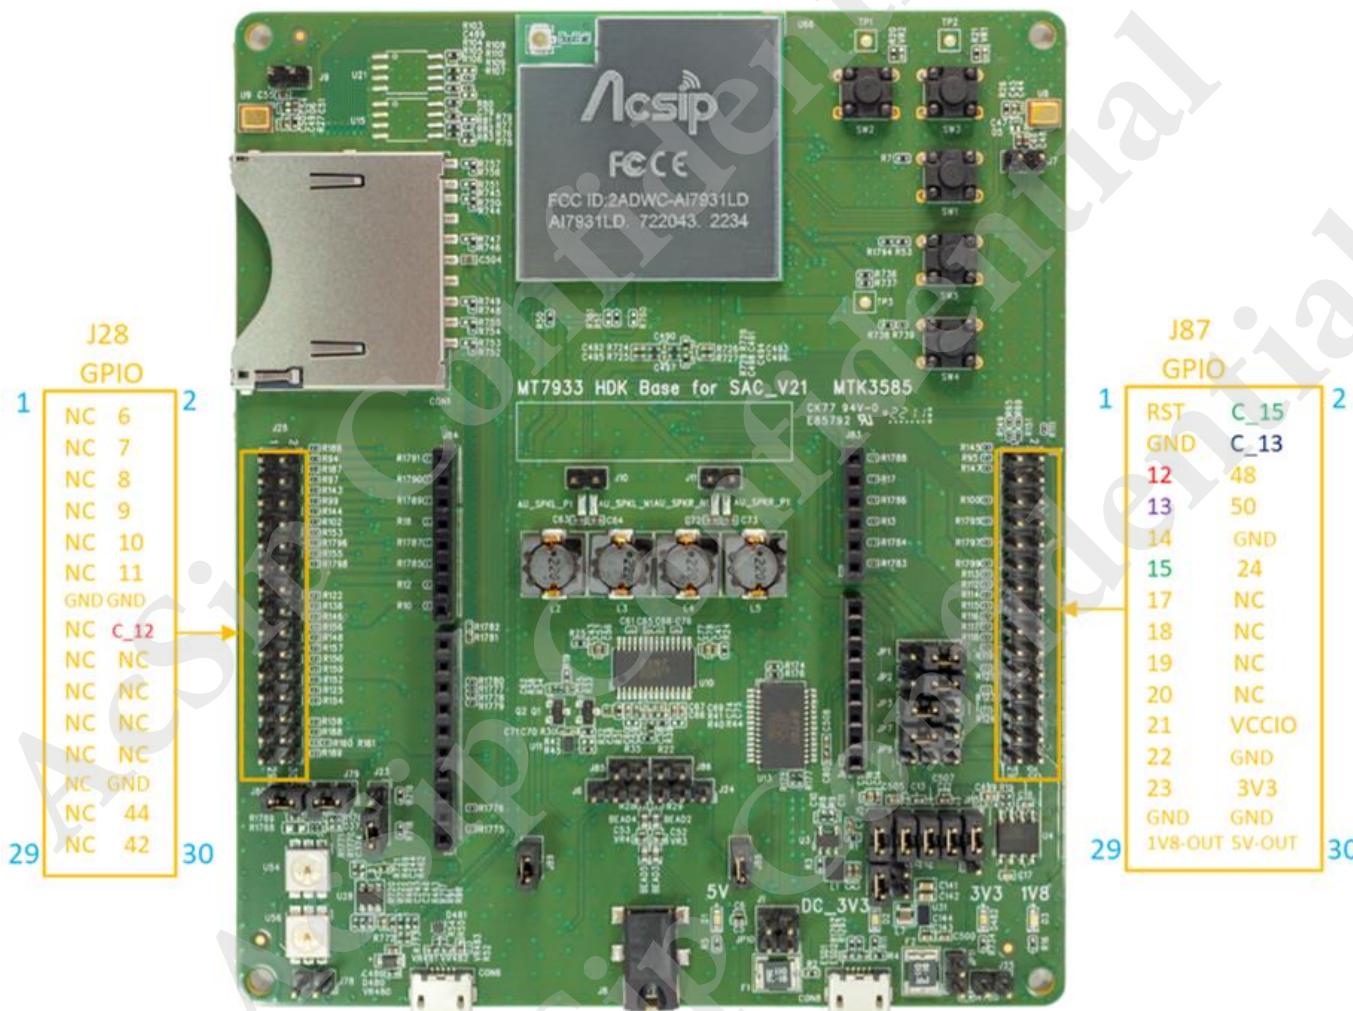

Pin name	Pin description	Pin description	Description
GPIO_B_0	GPIO12	Chip Mode Sel	1: Normal mode: Connect 10kΩ to VCCIO_B 0: RSVD

**GPIO\_B\_0 function in the boot strapping modes**

## 4.7 Extension connectors

The EK-AI7931LD provides similar pin-out extension connectors for various sensor and device connectivity, as shown in Figure.9 and described in Table 4.

The board has 22 GPIOs multiplexed with other interfaces. Depending on the use case, user can configure each I/O functionality.

Note: GPIO-12 & GPIO-C\_12 are the same circuit.

GPIO-13 & GPIO-C\_13 are the same circuit.

GPIO-15 & GPIO-C\_15 are the same circuit.

Figure 9. GPIO pin-out extension connectors

# PRODUCT USER GUIDE [www.acsip.com.tw](http://www.acsip.com.tw)

Table 4 GPIO pin-out extension connector

Signal Name	Connector Pin Number	Signal Name	Connector Pin Number
GPIO_0	Reserve for flash	GPIO_14	J87 - 9
GPIO_1	Reserve for flash	GPIO_15	J87 - 11
GPIO_2	Reserve for flash	GPIO_17	J87 - 13
GPIO_3	Reserve for flash	GPIO_18	J87 - 15
GPIO_4	Reserve for flash	GPIO_19	J87 - 17 Reserve for Arduino:I2C1_SDA
GPIO_5	Reserve for flash	GPIO_20	J87 - 19 Reserve for Arduino:I2C1_SCL
GPIO_6	J28 - 2 Reserve for Arduino:SPI0_CSK	GPIO_21	J87 - 21
GPIO_7	J28 - 4 Reserve for Arduino:SPI0_CSN	GPIO_22	J87 - 23
GPIO_8	J28 - 6 Reserve for Arduino:SPI0_MISO	GPIO_23	J87 - 25
GPIO_9	J28 - 8 Reserve for Arduino:SPI0_MOSI	GPIO_24	J87 - 12
GPIO_10	J28 - 10	GPIO_42	J28 - 30 Reserve for Arduino:UART1_RX
GPIO_11	J28 - 12	GPIO_44	J28 - 28 Reserve for Arduino:UART1_TX
GPIO_12	J87 - 5	GPIO_48	J87 - 6 Reserve for CM33 UART
GPIO_13	J87 - 7	GPIO_50	J87 - 8 Reserve for CM33 UART

## 5. Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

**FCC Caution:** Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

### IMPORTANT NOTE:

#### FCC Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Country Code selection feature to be disabled for products marketed to the US/CANA

# PRODUCT USER GUIDE [www.acsip.com.tw](http://www.acsip.com.tw)

## Integration instructions for host product manufacturers

### Applicable FCC rules to module

FCC Part 15.247

FCC Part 15.407

### Summarize the specific operational use conditions

The module is must be installed in mobile device.

This device is intended only for OEM integrators under the following conditions:

- 1) The antenna must be installed such that 20 cm is maintained between the antenna and users, and
- 2) The transmitter module may not be co-located with any other transmitter or antenna

As long as 2 conditions above are met, further transmitter test will not be required. However, the OEM integrator is still responsible for testing their end-product for any additional compliance requirements required with this module installed.

**IMPORTANT NOTE:** In the event that these conditions cannot be met (for example certain laptop configurations or co-location with another transmitter), then the FCC authorization is no longer considered valid and the FCC ID cannot be used on the final product. In these circumstances, the OEM integrator will be responsible for re-evaluating the end product (including the transmitter) and obtaining a separate FCC authorization. The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove this RF module in the user's manual of the end product which integrates this module.

The end user manual shall include all required regulatory information/warning as show in this manual.

### Limited module procedures

Not applicable

### Trace antenna designs

Not applicable

### RF exposure considerations

20 cm separation distance and co-located issue shall be met as mentioned in "Summarize the specific operational use conditions".

Product manufacturer shall provide below text in end-product manual

Product Name	EK-AI7931LD
Version	G
Doc No	912-13802
Date	2024/12/17
Page	25 / 26

# PRODUCT USER GUIDE [www.acsip.com.tw](http://www.acsip.com.tw)

"This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body."

## Antennas

Brand Name	Model Name	Antenna Type	Antenna Gain	Antenna Connector
SINBON	IAHA202205004	PCB Dipole	4.99 dBi	RF Mini Plug
SINBON	IAHA202205005	FPC Dipole	4.36 dBi	RF Mini Plug

## Label and Compliance Information

Product manufacturers need to provide a physical or e-label stating

"Contains FCC ID: 2ADWC-AI7931LD" with finished product

## Information on Test Modes and Additional Testing Requirements

Test tool: termite-3.3 shall be used to set the module to transmit continuously.

## Additional Testing, Part 15 Subpart B Disclaimer

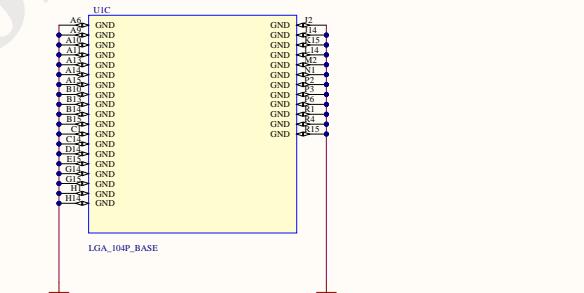

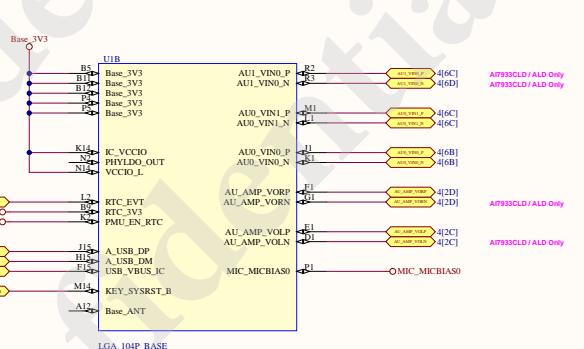

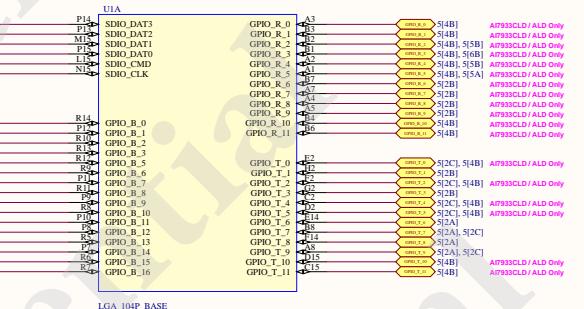

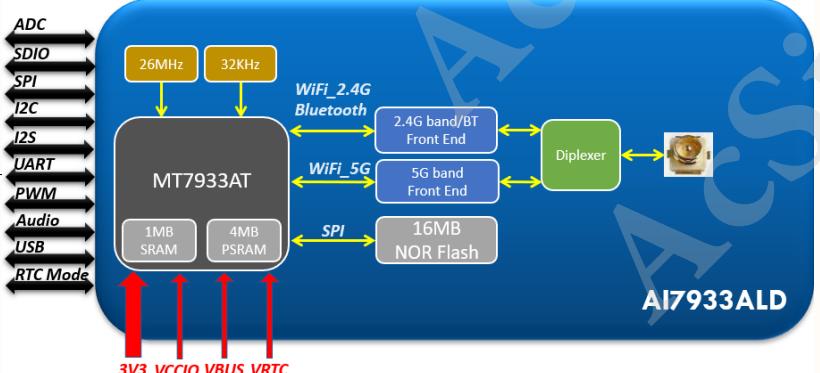

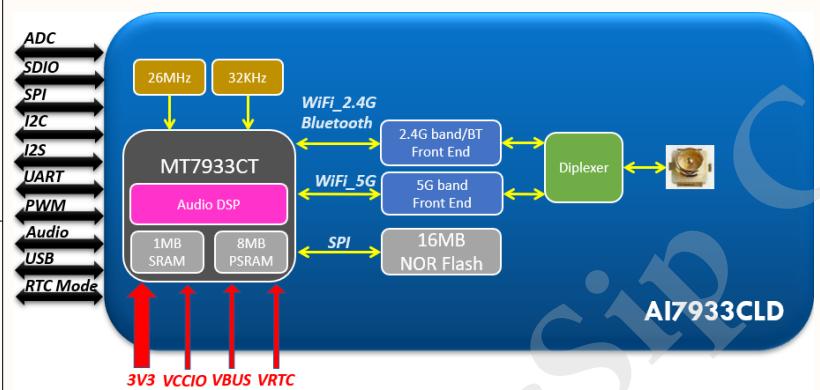

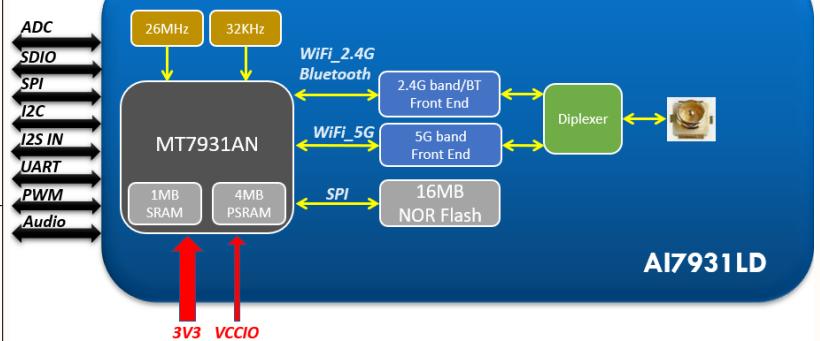

The module is only FCC authorized for the specific rule parts listed on the grant, and that the host product manufacturer is responsible for compliance to any other FCC rules that apply to the host not covered by the modular transmitter grant of certification. The final host product still requires Part 15 Subpart B compliance testing with the modular transmitter installed.
